QA Analyst Project

Sara Riboira - Exercice

1. What questions would you ask in order to clarify requirements?

- Where can I access "Add new user" page?

- Confirm whether the length of all Fields should go from 6-30 or if there are exceptions in FristName (10) and lastname(12)

- What is the content of the "Login" page (which required fieds and action buttons are available)?

- What is the content of the "change password" page (which required fieds and available action buttons)?

- What is the time limit for passowrd change?

- What happens if the password is not changed at the end of the time limit?

- After logoff which page should the user be redirected to?

- tbUser.LastName - varchar(12) - Is this correct? Should LastName be in a different table or should be in tblUser like the other fields in this page?

2. Specify 5 test cases to test this requirement

      1. Test Fields - Email length
> Open "Add new user" page - "Add new user" page opens successfully

> Insert an email with 5 characters. Insert a valid First Name and Last Name. Click "Save" button - Is not possible to create a new user with an email with the number of characters entered

> Insert an email with 31 characters. Insert a valid First Name and Last Name. Click "Save" button - Is not possible to create a new user with an email with the number of characters entered

> Insert an email with 6 characters. Insert a valid First Name and Last Name. Click "Save" button - New user is created successfully

> In "Add new user" page insert an email with 30 characters. Insert a valid First Name and Last Name. Click "Save" button - New user is created successfully

      2. Create new user + verify BD

> Open "Add new user" page - "Add new user" page opens successfully

> Insert a valid Email, First Name and Last Name. Click "Save. - New user is created successfully

> In database, search for the new user - User data is saved into the database correctly, in the following places: tblUser.Email - varchar(30); tblUser.FirstName - varchar(10); tbUser.LastName - varchar(12);

3. Temporary password

> Create a new user - New user created successfully

> Access the new user email - An email with a temporary password was received

> Open home page and log in with an invalid temporary password - Login fails

> Log in with the temporary password - Login is done successfully

4. Change password

> Create a new user and access the new user email - An email with a temporary password was received

> Open home page and log in with the temporary password - Login is done successfully

> Click "Change Password" - Opens "Change password" page

> Change password and click "Save" - Changes saved successfully

> Click "Log off" - The user is successfully logged out

> Login with an invalid password - The login fails

> Login with the temporary password - The login fails

> Login with the new password - Login is done successfully

5. Home page with authenticated user

> Open home page and log in with a valid user - Login successfully

> See home page - Email address, first name and last name displayed on the home page correctly
